

COMPANY OVERVIEW

OCH Technologies is a Virginia-based small business delivering enterprise technical and management solutions to government clients. We streamline workflows, simplify architectures, enhance security, and improve user experiences. Our flexible yet disciplined approach to IT and process modernization adapts as client needs evolve.

CORE CAPABILITIES

Application Modernization & Support

We sustain and modernize mission systems that are decades old, often with little documentation and a shrinking pool of people who know them. AI-assisted analysis helps our engineers understand legacy code quickly while keeping the design and risk decisions with them.

Systems Integration & Interoperability

We connect systems that were built separately and were never designed to share data. That starts with settling data ownership, then defining interfaces contract-first and building reconciliation for the cases where two systems disagree.

Secure Network Infrastructure & Cyber Defense

We build and defend networks to zero trust principles, beginning with an accurate inventory of what is actually deployed. Segmentation is designed so the operating team can maintain it, and network, host, identity, and application telemetry are brought into one place.

Penetration Testing & Vulnerability Management

We test for exploitability in the environment as it is actually configured, going beyond scanner output to confirm what an attacker could reach. Findings are ranked by what to fix first and delivered with the specific remediation that closes each one.

Mission Driven SaaS Implementation

We help programs select, configure, and adopt authorized commercial platforms. The real workflow is mapped first, exception paths included, and candidate platforms are scored against it rather than a feature checklist.

Cloud Engineering & Optimization

We migrate and run federal workloads within the constraints of data residency and the authorization boundary. The landing zone is authorized before anything moves into it, and each workload gets a rehost, replatform, or refactor decision based on its remaining life and cost.

IT Operations & Service Desk

We run IT operations and service desks for systems that cannot go down. Before changing anything we measure where the cost actually sits, then automate the repetitive tickets so staff time goes to the calls that need a person.

OCH PROVEN PROCESS

Understand the mission

We focus on your mission first: what your people depend on every day, where the real risks are, and what success looks like to them. Every technical decision we make is anchored to that need.

Committed teams

We staff your program with people who are invested in its outcome and we keep them there. Low turnover means the knowledge and relationships we build on your program stay with your program.

Secure from day one

We build security and compliance into the work from the first day of every program rather than bolting it on at the end. We deliver impact, accreditation ready and ahead of schedule.

Iterate & improve

We deliver in short cycles so you see real progress every few weeks, and we refine our approach as your priorities evolve. Course corrections happen early, while they are still inexpensive to make.

Proven transformation

We have replaced critical legacy systems with modern platforms, cut environment buildouts from weeks to hours, and given crisis operators the real-time view they need to respond faster. We bring that impact to your mission.
